AMENDMENTS TO THE SPECIFICATION

Please replace Paragraph [0034] with the following paragraph rewritten in amendment format:

[0034] The difference between the feedback signal 22 and the reference signal 26 is sensed by a sense amplifier 70 as shown in Figure 4. The feedback signal 22 and the reference signal 26 are input to the sense amplifier 70 from the inverted-phase detector 10. The sense amplifier 70 strobes the feedback signal 22 to amplify the difference between the feedback signal 22 and the reference signal 26. It is to be understood that any suitable sense amplifier may be used with the present invention. The sense amplifier 70 samples the signals from the inverted-phase detector 10 according to a sense amplifier clock 72. In the present implementation, the feedback circuit 20 may include the reference circuit 24 of FIG. 1.
